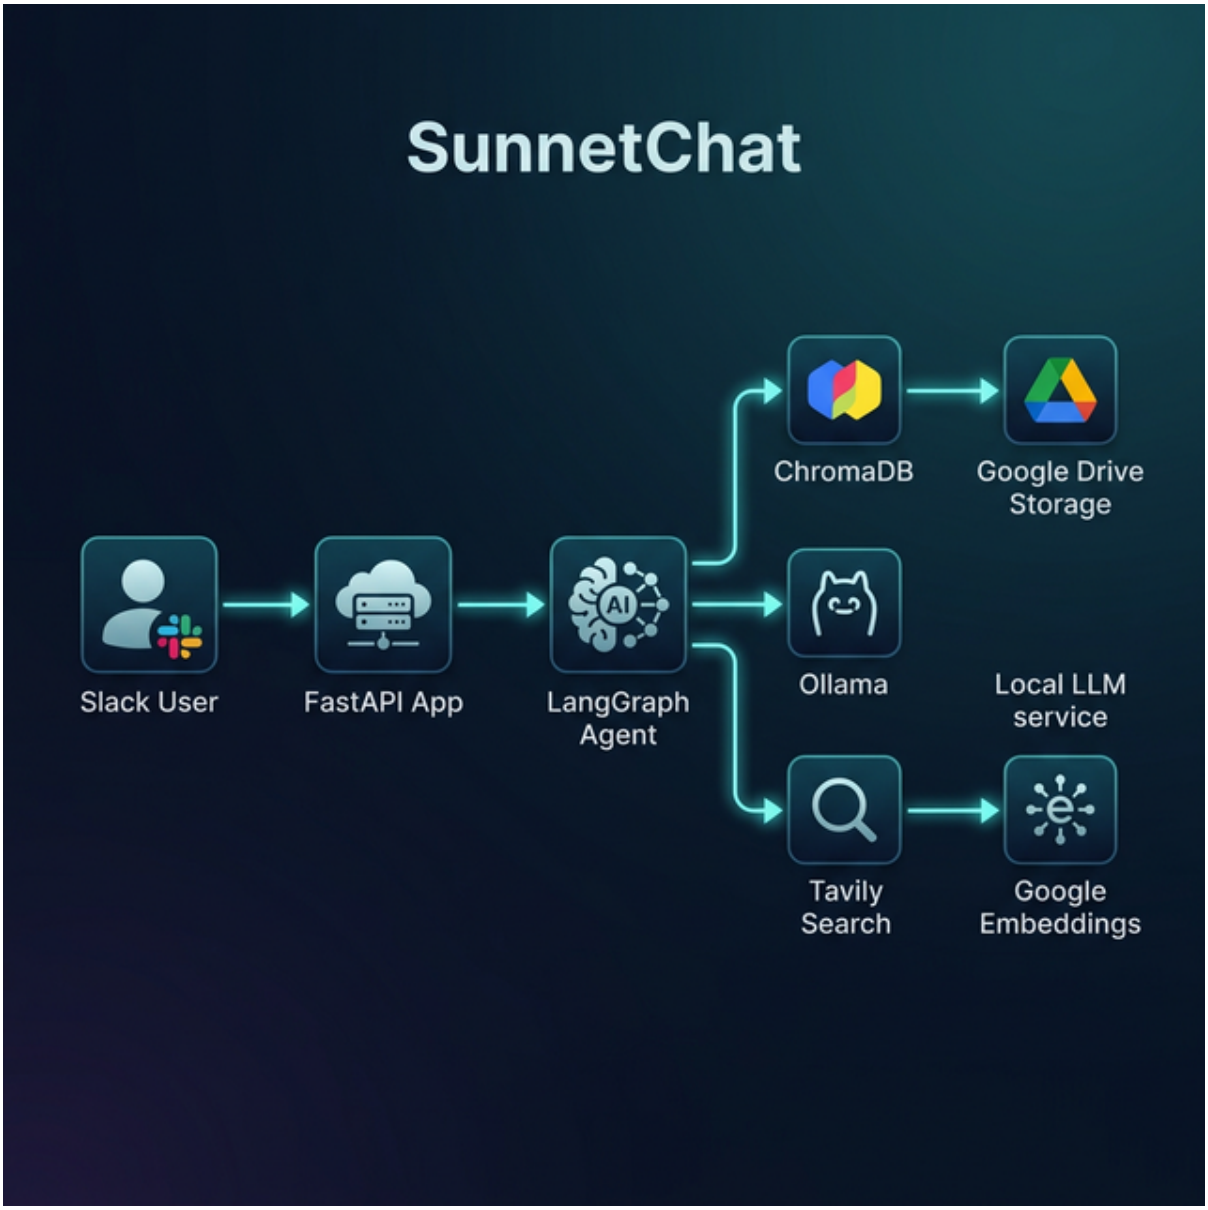
SunnetChat Project Architecture



System Overview

SunnetChat is an intelligent AI Slack bot with advanced RAG (Retrieval-Augmented Generation) capabilities. It is designed for document processing, knowledge management, and real-time information retrieval.

Core Components

Component	Description

FastAPI App	Main application server handling Slack events and API requests.
LangGraph Agent	Orchestrates the RAG workflow and decision-making logic.
ChromaDB	Vector database for storing and retrieving document embeddings.
Ollama	Local LLM service for response generation.
Tavily	External web search service for real-time information.
Google Drive	Cloud storage for document knowledge base.

Project Structure

- **app/**: Main application code (FastAPI, LangGraph Agents, RAG core)
- **tests/**: Comprehensive test suite
- **scripts/**: Utility scripts for ingestion
- **docker-compose.yml**: Multi-container deployment configuration
